PERSONAL SUMMARY

Software Engineer with **5+ years** of professional experience building **scalable backend systems** and **AI-powered applications**. Skilled in Python, API design, and server-side development, with experience integrating **LLM-based features**, AI-powered capabilities, and automation workflows into applications.

SKILLS

Languages: Python, C++, C#, Java, JavaScript, SQL, .NET

Backend: FastAPI, Flask, Node.js/Express, gRPC, REST, GraphQL, WebSockets, Microservices

Databases: PostgreSQL, MySQL, MongoDB, ClickHouse

AI/LLM: OpenAI API, Gemini, Claude, LangChain, LangGraph, CrewAI, Prompt Engineering

Cloud/DevOps: AWS, Docker, GitHub Actions, Git

Testing: Pytest, JUnit, Postman, Prometheus, Grafana

Security: Ghidra, IDA Pro, Wireshark

ABOUT

- 5+ years of software engineering across **backend systems**, AI/LLM integration, and security domains
- Specialized in **Python microservices**, RAG systems, and AI automation tools
- Experience across **trading systems**, game security, enterprise APIs, and AI-powered applications
- Open-source developer with **10K+ downloads** across published AI tools on GitHub, PyPI, and GPT Store

PROFESSIONAL EXPERIENCE & HIGHLIGHTS

Software Developer – CREED&BEAR LLC | Dubai, UAE

Apr 2024 – May 2025

- Developed **OMS backend microservices in Python (FastAPI)** for high-performance cryptocurrency trading systems.
- Designed APIs, service interactions, and data models supporting **high-throughput trading workflows**.
- Integrated multiple cryptocurrency exchanges using **REST and WebSocket protocols**.
- Implemented **authentication, rate limiting, reconnect/backoff logic**, and data normalization pipelines.

Software Developer – AUDIOMOB LTD | Abu Dhabi, UAE

Jul 2022 – Jan 2023

- Developed **Unity-based audio advertising systems** deployed across iOS and Android games.
- Implemented **client-server architecture** supporting real-time event tracking and callbacks.
- Integrated monetization SDKs and APIs to improve **developer revenue generation**.
- Optimized **asset caching and delivery** pipelines to improve startup performance and stability.

Software Developer – iBLOXX Trading | Dubai, UAE

Feb 2022 – Apr 2022

- Developed **cryptocurrency trading bots** using C# .NET with full order lifecycle management.
- Implemented **market data ingestion pipelines** and basic risk controls.
- Built **GraphQL and REST collectors** for exchange data aggregation across multiple platforms.
- Developed resilient **WebSocket consumers** with fault-tolerant reconnect logic.

Software Analyst – Rockstar Games | Bangalore, India

Jun 2019 – Sep 2021

- Built automation tools for **cheat detection in GTA V and Red Dead Redemption 2**.
- Developed detection scripts and tools using **C# and C++** for cheat pattern analysis at scale.
- Improved internal reporting and **detection pipelines for anti-cheat enforcement**.
- Collaborated with security teams to validate countermeasures and detection rule accuracy.

- Developed **anti-malware detection modules** in C/C++ for enterprise security products.
- Performed **malware reverse engineering** using IDA Pro and Ghidra.
- Improved SQL query performance and testing workflows to enhance **reliability and throughput**.

Software Developer – FH LABS (pEdge) | Delhi, India

Jul 2017 – Nov 2017

- Developed **FX modules for ERP systems** used by financial institutions.
- Implemented **SOAP and REST APIs** for enterprise service integration.
- Collaborated on integration testing and **client acceptance workflows** in cloud environments.

PROJECTS — Personal / Open-Source**Open-Source AI Projects**

Feb 2023 – Mar 2024

Built and maintained open-source AI applications focused on LLM integration, RAG systems, agent workflows, and developer productivity tools.

- Built **AI-powered applications** using OpenAI, Gemini, Claude, and LangChain for automation and productivity.
- Developed **RAG-based systems**, AI assistants, and LLM workflow automation tools.
- Created open-source projects including **Code Interpreter** and **CodeRunner Plugin**, published to PyPI and GPT Store.
- Worked on **LLM integrations, prompt engineering**, agent workflows, and AI application development.

GWorkspace Agent [↗ github.com/haseeb-heaven/gworkspace-agent](https://github.com/haseeb-heaven/gworkspace-agent)*Python · LangChain · LangGraph · CrewAI*

Agentic AI assistant automating Google Workspace via natural language using ReAct + LangGraph DAG architecture.

- Built **multi-agent pipelines** with LangChain, LangGraph, and CrewAI for Gmail, Drive, Sheets, Docs, and Calendar.
- Implemented **ReAct planning**, sandboxed code execution, retry/backoff, and long-term memory via JSONL + Mem0.
- Supports **CLI, Desktop GUI, Gradio, and Telegram Bot** interfaces with read-only and sandbox safety modes.

Code Interpreter [↗ github.com/haseeb-heaven/code-interpreter](https://github.com/haseeb-heaven/code-interpreter)*Python · OpenAI · Gemini · Claude · Groq · DeepSeek*

Open-source multi-LLM interpreter for converting natural language into executable code.

- Supports **10+ LLM providers** including OpenAI, Gemini, Claude, Groq, and DeepSeek.
- Safe/unsafe **sandbox modes** with dangerous operation blocking and self-repair on failures.
- **Published on PyPI** and supports Windows, macOS, and Linux.

CodeRunner Plugin [↗ github.com/haseeb-heaven/coderunner-chatgpt](https://github.com/haseeb-heaven/coderunner-chatgpt)*Python · FastAPI · Quart · JDoodle API*

ChatGPT plugin enabling in-browser code execution across 70+ programming languages.

- Integrates **JDoodle Compiler API** for code execution with syntax highlighting and error feedback.
- Reached **10K+ downloads**; deployed on Vercel with freemium pricing.

- **Published to the GPT Store;** featured in CustomGPT.ai's industry survey alongside 17 plugin developers.

Project IGI Editor [↗ github.com/jones-hm/project-igi-editor](https://github.com/jones-hm/project-igi-editor)

C++ · OpenGL · DirectX · 3D Game Level Editor

Professional 3D world and object manipulation toolkit for Project IGI, inspired by the official IGI 2 Editor.

- Built a **real-time editor** for objects, AI, terrain, and graph-based level workflows for Project IGI content creation.
- Created a complex **3D game editor** in one month using AI-assisted development with Claude Code, combining human guidance, context engineering, and rapid iteration.
- Accelerated prototyping and delivery for a traditionally long-cycle game tooling project through **AI-human collaboration**.

EDUCATION

B.Tech in Computer Science

University of Kashmir | 2011 – 2015
