Professional Summary

Software Engineer with experience building scalable systems and AI-powered applications. Skilled in backend development, API design, databases, and server-side development, with experience integrating LLM-based features into applications. Focused on building reliable systems and improving AI integration workflows.

Core Skills

Languages: Python, C++, C#, Java, JavaScript, SQL, .NET

Backend: FastAPI, Flask, Node.js/Express, gRPC, REST, GraphQL, WebSockets, Microservices

AI/Automation: OpenAI API, Gemini, Claude, LangChain, Prompt Engineering, LLM-based application development

Cloud/DevOps: AWS, Docker, Kubernetes, GitHub Actions, Jenkins

Data/Messaging: PostgreSQL, MySQL, MongoDB, ClickHouse

Testing/Observability: Pytest, JUnit, Postman, Prometheus, Grafana

Security/Tools: Ghidra, IDA Pro, Wireshark, Git

Work Experience

Software Developer — CREED&BEAR LLC, Dubai, UAE

Apr 2024 – May 2025

- Developed OMS backend microservices in **Python (FastAPI)** for trading systems.
- Designed APIs, service interactions, and data models supporting high-performance trading workflows.
- Integrated multiple cryptocurrency exchanges using **REST and WebSockets**.
- Implemented authentication, rate limiting, reconnect/backoff logic, and data normalization pipelines.

Software Developer — AUDIOMOB LTD, Abu Dhabi, UAE

Jul 2022 – Jan 2023

- Developed **Unity-based audio advertising systems** for iOS and Android games.
- Implemented client-server architecture supporting real-time event tracking and callbacks.
- Integrated monetization SDKs and APIs to improve developer revenue generation.
- Optimized asset caching and delivery to improve startup performance and stability.

Software Developer — iBLOXX Trading, Dubai, UAE

Feb 2022 – Apr 2022

- Developed cryptocurrency trading bots using **C# .NET**.
- Implemented order lifecycle logic, market data ingestion, and basic risk controls.
- Built GraphQL and REST collectors for exchange data aggregation.
- Developed resilient **WebSocket consumers** with fault-tolerant reconnect logic.

Game Security Analyst — Rockstar Games, Bangalore, India

Jun 2019 – Sep 2021

- Built automation tools for cheat detection in **GTA V** and **Red Dead Redemption 2**.
- Developed scripts and tools using **C# and C++** for cheat pattern analysis.
- Improved internal reporting and detection pipelines for anti-cheat enforcement.
- Collaborated with security teams to validate countermeasures and detection rules.

Software Developer — Ena Technologies, Delhi, India

Nov 2017 – Jan 2019

- Developed **anti-malware modules** in C/C++.
- Performed malware reverse engineering using **IDA Pro and Ghidra**.

- Improved SQL queries and testing workflows to enhance performance and reliability.

Software Developer — *FH LABS (pEdge), Delhi, India*

Jul 2017 – Nov 2017

- Developed **FX modules** for ERP systems used by financial institutions.
- Implemented SOAP and REST APIs for enterprise service integration.
- Assisted in deployment and maintenance of services within cloud environments.
- Collaborated on integration testing and client acceptance workflows.

Education

University of Kashmir

Jan 2011 – Dec 2015

Bachelor of Technology (Computer Science)

Projects

GWorkspace Agent

Python · LangChain · LangGraph · CrewAI

Agentic AI assistant automating Google Workspace via natural language using ReAct + LangGraph DAG architecture.

- Built multi-agent pipelines with **LangChain, LangGraph, and CrewAI** for Gmail, Drive, Sheets, Docs, and Calendar.
- Implements **ReAct planning**, sandboxed code execution, retry/backoff, and long-term memory via JSONL + Mem0.
- Supports **CLI, Desktop GUI, Gradio, and Telegram Bot** interfaces with read-only and sandbox safety modes.

Code Interpreter

Python · OpenAI · Gemini · Claude · Groq · DeepSeek

Open-source multi-LLM interpreter for converting natural language into executable code.

- Supports **10+ LLM providers** including OpenAI, Gemini, Claude, Groq, and DeepSeek.
- Safe/unsafe **sandbox modes** with dangerous operation blocking and self-repair on failures.
- Published to **PyPI**; cross-platform on Windows, macOS, and Linux.

CodeRunner Plugin

Python · FastAPI · Quart · JDoodle API

ChatGPT plugin enabling in-browser code execution across 70+ programming languages.

- Integrates **JDoodle Compiler API** for execution with syntax highlighting and error feedback.
- Reached **10K+ downloads** and **100+ active users**; deployed on Vercel with freemium pricing.
- Published to the **GPT Store**; featured in **CustomGPT.ai's** industry survey alongside 17 plugin developers.

Additional Expertise

- Microservice-based backend systems and service integrations
- AI-assisted development tools and LLM integration
- Game engine tooling and automation systems
- Backend systems and API design
